How to Instructions For Crystal Clay Earrings

We look forward to bringing you exclusive innovations
and distinctive products this year and beyond.

www.nunndesign.com

NUNN DESIGN SUPPLIES:

Ornate Mini Pendant Circle-Single Loop Silver
Kidney Earwires-Silver
Crystal Clay-Brown
Crystal Chatons

TOOLS NEEDED:

Beeswax Toothpick (included with Crystal Clay)
Wet wipes or wet paper towel

STEP 1:

Pinch off two equal blueberry size balls of Part A (the color) and Part B (the hardener). Knead the two equal size balls fully together until the clay is a consistent color and not marbled. **(Images 2 & 3)**

STEP 2:

Divide the clay into 2 equal parts, one for each earring. Roll the kneaded Epoxy Clay into a round ball. Pat the clay gently into the Ornate Mini Pendant Circle Single Loop creating a high dome by slightly pinching and patting the Epoxy Clay into position. If you need more clay, just go ahead and mix up more from Step 1. **(Image 4)**

STEP 3:

Pour out your vial of Crystal Chatons-Crystal. Using the beeswax toothpick that is included in the Crystal Clay Epoxy Clay Kit start to place the Crystal Chatons inside of the Ornate Mini Pendant Circle. I like to start on the outside edge and work my way into the center. *Tip: Do not press down super hard. Just get the tip of the Chaton into the clay. If you press down too hard, it will make the dome uneven and it will be super challenging to get the Chatons out without really digging into the clay.* **(Images 5-9)**

STEP 4:

Once all of your Chatons are in place, use your fingers to slightly press all of your Chatons down into the clay making sure that each one is fully submerged into the clay. You will also be using your fingers to make sure your domed clay is nicely sculpted. If you have a stone fall out once the clay has cured, chances are that the Chaton's point wasn't fully emerged. If a stone does pop off, you can glue it back into place. I tend to like to use GS-Hypo Cement or Bond 527 Cement.

STEP 5:

Using a damp wet cloth, wipe away any Epoxy Clay that might be smudged around. When it dries, it will be REALLY hard to get off. **(Image 10)**

STEP 6:

Your pendants will cure in 12-14 hours.

STEP 7:

Thread your cured pendants onto the Kidney Ear wires. **(Images 11 & 12)**

Step 8:

Can you believe it! It really is this simple!

MAKE THESE TOO!

Once you get the hang of the Crystal Clay, you will be hooked on a new craft. Complete your jewelry accessories with these other fun DIY jewelry making projects.
