

RESIN OBSESSION COLOR PIGMENTS

Choose from 25 different colors of pigments in opaque, transparent and translucent neon shades.

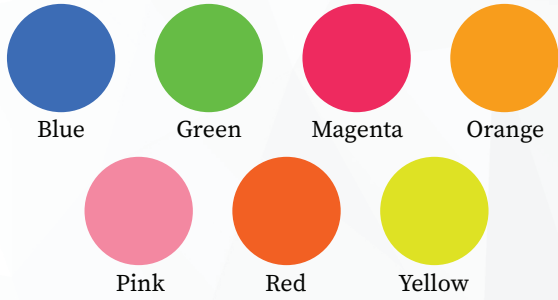

How to use

Gently stir the pigment into the epoxy resin until you reach the depth of color desired. Do not exceed 10% of the total weight of Part A as this may prevent the system from curing. **The amount of color you mix into the resin contributes to the total amount of Part A.** Add additional hardener as necessary.

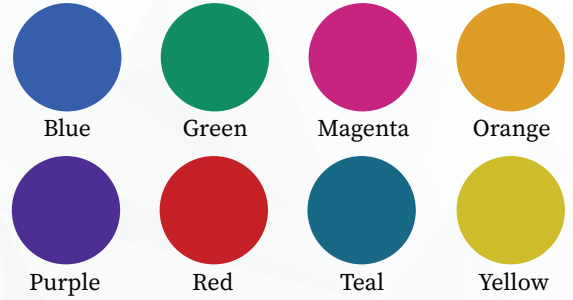

Carefully mix the two parts together scraping the sides of your cup and stir utensil several times during the process. Cast as desired.

Note: These pigments were designed for use with the Resin Obsession super clear resin. While customers have told us they work with other brands of resin, we cannot assure quality results with every brand of resin.
